

A HANDY TIP FOR IPHONE USERS

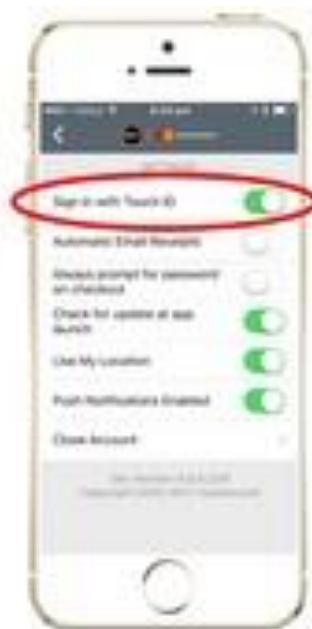

Instructions for using Touch ID on iPhones.

If using an iPhone or iPad, you can make it easier to access QKR using Touch ID.

You can use this feature by adjusting the first setting on the screenshot below called “Sign in with TouchID”. Instead of needing to remember a password simply use your fingerprint every time you want to open Qkr or authorise a payment.

It is important to understand that Mastercard or the bank does not have access to your actual fingerprint, as it is stored within the phone and access is controlled by Apple as per your preferences.

Settings can be reached by tapping the three horizontal bars in the top right hand corner of the Qkr app when you are in the “Nearby locations” screen (where you select Lysterfield Primary School). Go into settings then select the sign in with touch ID.
